[Github](#), [Website](#)

EDUCATION

[AWS Academy Cloud Foundations Course](#)

Dec 2020 – Jan 2021

Diploma in Web Development, Developers Institute

Aug 2020 – Mar 2021

Bachelor of Software Engineering, Media Design School

Feb 2016 – Nov 2018

SKILLS

TECHNICAL SKILLS

HTML, CSS, Javascript, C#, React.js, SASS, Node.js, Express, Bootstrap, RESTful APIs, Docker, MongoDB, Mongoose, Git, SQL, JEST, AWS, OpenAPI, Frontend Build Pipelines – Netlify/Heroku

SOFT SKILLS

Web Accessibility, AGILE Development, Object Oriented Programming, Continuous Integration/Continuous Deployment

PERSONAL PROJECTS

Litehaus – [Frontend Github](#), [Backend Github](#), [Demo](#)

A Full Stack web app where you can watch your favourite stocks, created using React.js, Express, PostgreSQL, and [Finnhub API](#)

- Designed both desktop and mobile layouts of the web app using Figma.
- Implemented authorization functionality using JSON Web Tokens.
- Developed search functionality where the user can get results from the Finnhub API based on their query.
- Created a list to display information on the user's favourite stocks they have chosen to watch.

Countries Web App – [Github](#), [Demo](#)

A JAMStack web app where you can get information about countries, built using React.js and [REST Countries API](#)

- Integrated with the REST Countries API to fetch country data and display them following design specifications.
- Developed search and filtering functionality, as well as displaying information about the country when clicked on.
- Implemented a dark mode toggle.

Nook's Cranny ecommerce site – [Github](#), [Demo](#)

A JAMStack ecommerce website based on Nook's Cranny, made using React.js and [ACNH API](#)

- Designed an ecommerce site that displays item's and allows users to add them to a cart.
- Fetched data from Animal Crossing New Horizons API to get information about items available to purchase in the store in the game.
- Developed search functionality and the ability for users to view the different colours of the items.
